**Aviation Security Management [3 volumes]** Andrew R. Thomas 2008-10-30 Because of 9/11, there is universal recognition that aviation security is a deadly serious business. Still, around the world today, the practice of aviation security is rooted in a hodgepodge of governmental rules, industry traditions, and local idiosyncrasies. In fact, nearly seven years after the largest single attack involving the air transport industry, there remains no viable framework in place to lift aviation security practice out of the mishmash that currently exists. It is the ambitious intent of **Aviation Security Management** to change that. The goals of this set are nothing less than to make flying safer, to make transporting goods by air safer, and to lay the foundation for the professionalization of this most important field. This dynamic set showcases the most current trends, issues, ideas, and practices in aviation security management, especially as the field evolves in

the context of globalization and advances in technology. Written by leading academic thinkers, practitioners, and former and current regulators in the field, the three volumes highlight emerging and innovative practices, illustrated with examples from around the world. Volume 1 takes a penetrating look at the overall framework in which aviation security management has taken place in the past and will likely do so in the foreseeable future. It covers the major areas of focus for anyone in the aviation security business, and it provides a basis for educational programs. Volume 2 delves into the emerging issues affecting aviation security managers right now. Volume 3: Perspectives on Aviation Security Management covers the full spectrum of international aviation security-related issues. It will serve as part of the foundation for the next generation of research in the area in both a business and cultural context. Collectively, these volumes represent the state of the art in the field today and constitute an essential resource for anyone practicing, studying, teaching, or researching aviation security management.
