**Back to Basics** International Monetary Fund 2017-11-01 This paper discusses about capitalism that is often thought of as an economic system in which private actors own and control property in accord with their interests, and demand and supply freely set prices in markets in a way that can serve the best interests of society. The essential feature of capitalism is the motive to make a profit. In a capitalist economy, capital assets—such as factories, mines, and railroads—can be privately owned and controlled, labor is purchased for money wages, capital gains accrue to private owners, and prices allocate capital and labor between competing uses. Although some form of capitalism is the basis for nearly all economies today, for much of the past century it was but one of two major approaches to economic organization. In the other, socialism, the state owns the means of production, and state-owned enterprises seek to maximize social good rather than profits.

In keeping with the authors' philosophy of showing students the power of economic tools and the importance of economic ideas, this edition pays careful attention to regional and global policies and economic issues - including the impacts of the contemporary macroeconomic issues, inflation, unemployment, interest rates, and monetary and fiscal policy. The resource emphasises the material that students should and do find interesting about the study of the economy, resulting in a focus on applications and policy, and less on formal economic theory. Principles of Macroeconomics, 8th edition encourages students to make their own judgements by presenting both sides of the debate on five controversial issues facing policy makers: the proper degree of policy activism in response to the business cycle, the choice between rules and discretion in the conduct of monetary policy, the desirability of reaching zero inflation, the importance of balancing the government's budget, and the need for tax reform to encourage saving.
