Universal Access in Human-Computer Interaction: Aging and Assistive Environments Constantine Stephanidis 2014-05-15 The four-volume set LNCS 8513-8516 constitutes the refereed proceedings of the 8th International Conference on Universal Access in Human-Computer Interaction, UAHCI 2014, held as part of the 16th International Conference on Human-Computer Interaction, HCI 2014, held in Heraklion, Crete, Greece in June 2014, jointly with 14 other thematically similar conferences. The total of 1476 papers and 220 posters presented at the HCI 2014 conferences was carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The total of 251 contributions included in the UAHCI proceedings were carefully reviewed and selected for inclusion in this four-volume set. The 75 papers included in this volume are organized in the following topical sections: design for aging; health and rehabilitation applications; accessible smart and assistive environments; assistive robots and mobility, navigation and safety.

America's First Network TV Censor Robert Pondillo 2010-04-23 America's First Network TV Censor: The Work of NBC's Stockton Helffrich is a unique examination of early television censorship, centered around the papers of Stockton Helffrich, the first manager of the censorship department at NBC. Set against the backdrop of postwar America and contextualized by myriad primary sources including original interviews and unpublished material, Helffrich's reports illustrate how early censorship of advertising, language, and depictions of sex, violence, and race shaped the new medium. While other books have cited Helffrich's reports, none have considered them as a body of work, complemented by the details of Helffrich's life and the era in which he lived. America's First Network TV Censor explores the ways in which Helffrich's personal history and social class influenced his perception of his role as NBC-TV censor and his tendency to ignore certain political and cultural taboos while embracing others. Author Robert Pondillo considers Helffrich's life in broadcasting before and after the Second World War, and his censorial work in the context of 1950s American culture and emerging network television. Pondillo discusses the ways that cultural phenomena, including the arrival of the mid-twentieth-century religious boom, McCarthyism, the dawn of the Civil Rights era, and the social upheaval over sex, music, and youth, contributed to a general sense that the country was morally adrift and ripe for communist takeover. Five often-censored subjects--advertising, language, and depictions of sex, violence, and race--are explored in detail, exposing the surprising complexity and nuance of early media censorship. Questions of whether too many sadistic westerns would coarsen America's children, how to talk about homosexuality without using the word "homosexuality," and how best to advertise toilet paper without offending people were on Helffrich's mind; his answers to these questions helped shape the broadcast media we know today.

Sony Alpha DSLR A100: A Better Manual Ken Milburn 2007-05-04 This unique manual is better than the manual that comes with yourcamera in several important ways: It's organized according to efficient workflow, so you can get the most out of your Sony A100 quickly and with the least amount of bother.You can find what you're looking for interactively: by using the interactiveTable of Contents, choosing one of the questions in the Quick Answersection, or by following any of the convenient links we've placed throughoutthe document. It's not a book (unless you want it to be). It's a PDF that you can read onyour computer or on a PDA that fits into your camera bag. It is laid out onan 8.5 x 11-inch "page" so if you want to print, you won't have to wastepaper or spend time configuring your printer. Because it's a PDF, you can find subjects you're looking for by searchingelectronically. Typing Cmd/Ctrl-F brings up the familiar search dialog. So allyou have to do to jump straight to all the references to a particular part orfeature is to enter its name. (No reliance on a mindreading indexer.) The PDF is photographically illustrated so you can see exactly whichcombination of buttons, knobs, wheels, and menu choices will help youmake the magic you are hoping for. In addition to teaching technically correct procedures, this documentoffers valuable hints for taking photographs in some of the toughestsituations.

Ubiquitous Computing Stefan Poslad 2011-08-10 This book provides an introduction to the complex field of ubiquitous computing Ubiquitous Computing (also commonly referred to as Pervasive Computing) describes the ways in which current technological models, based upon three base designs: smart (mobile, wireless, service) devices, smart environments (of embedded system devices) and smart interaction (between devices), relate to and support a computing vision for a greater range of computer devices, used in a greater range of (human, ICT and physical) environments and activities. The author details the rich potential of ubiquitous computing, the challenges involved in making it a reality, and the prerequisite technological infrastructure. Additionally, the book discusses the application and convergence of several current major and future computing trends. Key Features: Provides an introduction to the complex field of ubiquitous computing Describes how current technology models based upon six different technology form factors which have varying degrees of mobility wireless connectivity and service volatility: tabs, pads, boards, dust, skins and clay, enable the vision of ubiquitous computing Describes and explores how the three core designs (smart devices, environments and interaction) based upon current technology models can be applied to, and can evolve to, support a vision of ubiquitous computing and computing for the future Covers the principles of the following current technology models, including mobile wireless networks, service-oriented computing, human computer interaction, artificial intelligence, context-awareness, autonomous systems, micro-electromechanical systems, sensors, embedded controllers and robots Covers a range of interactions, between two or more UbiCom devices, between devices and people (HCI), between devices and the physical world. Includes an accompanying website with PowerPoint slides, problems and solutions, exercises, bibliography and further reading Graduate students in computer science, electrical engineering and telecommunications courses will find this a fascinating and useful introduction to the subject. It will also be of interest to ICT professionals, software and network developers and others interested in future trends and models of computing and interaction over the next decades.
